

YOUR EVALUATION

Brain Intercept is a multidisciplinary team passionate about brain health. We specialize in functional performance of the brain and how it affects your day-to-day living. We treat people through all stages of adulthood; everything from “brain fog” to mild cognitive impairment to dementia. We help clients and their families understand what is affecting their cognition and what they can do to maximize performance and quality of life for years to come.

PROTECTING YOUR BRAIN BEGINS WITH UNDERSTANDING

EVOKE EVOX BRAIN SCAN:

Identifying the “why” behind the symptoms you are experiencing can be challenging because the same symptoms can mean different things.

The eVox scan is a QEEG scan of the brain that evaluates how your brain is working by measuring the brain’s flow of electrical energy. This provides a better understanding of what may be causing your symptoms.

To begin, you answer a series of questions that screen for neuropsychological function.

During the scan, you wear an EEG cap and complete a series of simple exercises on the computer while your brain activity is recorded.

The benefit of the scan is that it is a pain-free and non-invasive way to identify root causes of your symptoms to personalize treatment.

NEUROSCIENCE

FUNCTIONAL EVALUATION:

An evaluation by a therapist, who specializes in cognition, is completed and paired with the eVox scan to provide each client with a detailed picture of their brain function.

Education is provided with this evaluation to begin a treatment plan for optimized brain health.

TREATMENT FOLLOWING SCAN & EVALUATION

Following Evaluation We Provide Two Main Treatment Options

BRAIN HEALTH

Goal of maximizing cognitive health to slow or even prevent continued decline that may place individuals at risk of functional deficits limiting independence.

LIVING WITH DEMENTIA OR CHRONIC BRAIN CHANGES

Goal of stabilizing cognition and assisting individuals to live a high-quality life, despite living with irreversible cognitive changes.
